

Business Canvas: Codefi Farm Financial Planning

1. Problem

Top Problems Identified: - Farm financial uncertainty: Farmers lack real-time visibility into how input costs, market prices, and yield decisions impact profitability - Limited decision support: No accessible tools for scenario planning (e.g., "What if I lock in fertilizer now vs. wait?") - Data silos: Farm data scattered across lenders, extension services, and spreadsheets; no integrated view

Existing Alternatives: Spreadsheets, conversations with lenders/advisors, legacy accounting software, gut instinct

2. Customer Segment

Primary Target: - Demographics: Mid-scale farmers (500–5,000 acres) in Midwest, primarily Missouri - Behaviors: Active input/crop decision-makers, seeking to optimize margins, willing to adopt digital tools for ROI - Pain Points: Uncertainty on input timing, pricing pressure, limited access to financial benchmarking data

Early Adopters: Farmers already working with extension offices, co-ops, lenders; digitally-forward operators seeking competitive edge

3. Unique Value Proposition

Core UVP Statement: LLM-powered financial scenario planning that shows farmers exactly how input timing and pricing decisions impact profitability — with benchmarking insights from peer farms in their region.

Key Differentiators: - AI-driven scenario engine makes complex financial modeling accessible - Benchmarking powered by aggregated farmer data (no competitor has this dataset) - Built for farmers by ag experts with deep local relationships

4. Solution

Core Features: - Scenario Engine: "What-if" modeling for input costs, timing, yield assumptions — shows margin impact - Benchmarking: AI compares your farm to similar operations (soil type, acreage, region) to surface best practices - Cost Tracking & Integration: Links to lender/co-op data for real-time input cost visibility

MVP Scope: Scenario engine + cost structure inputs + basic benchmarking for pilot farmers

5. Channels

Acquisition Channels: - Partnerships: Missouri agricultural extension offices, farmer co-ops, agricultural lenders - Direct Sales: Codefi's shared services sales team using social outreach, warm introductions, consultant referrals

Activation: Easy-to-use interface + training + AI-assisted onboarding guidance

Retention: New features and demonstrated ROI (margin improvements from better decisions)

6. Revenue Streams

Primary Revenue: - Model: SaaS subscription - Pricing: \$100–\$250/month per farm operation

Secondary Revenue (v2): - API integrations for lenders, co-ops, extension services

7. Cost Structure

Fixed Costs: - Engineering/development salaries - Product management - Cloud infrastructure

Variable Costs: - AI token costs (to be determined in beta) - Customer support & success - Payment processing fees - Sales support (shared services model)

Key Cost Drivers: Engineering headcount and AI token usage as customer base scales

8. Key Metrics

North Star Metric: MRR (Monthly Recurring Revenue)

Supporting Metrics: - Acquisition: New farm operations signing up per month - Activation: % of signups completing onboarding and running first scenario - Retention: % of customers retained at 3, 6,

and 12 months - Revenue: MRR growth trajectory and expansion revenue

9. Unfair Advantage

Competitive Moat: Data network effects + first-mover in LLM-powered financial scenario planning for farmers

Defensibility Factors: - **Data Benchmarking Engine:** Aggregated farmer scenarios, costs, outcomes train proprietary AI; competitors cannot replicate without equivalent user base - **Local Trust & Distribution:** Codefi's relationships with Missouri extension offices, co-ops, lenders; farmers buy from people they trust, and trust is local - **Unique Positioning:** Sit at intersection of LLM expertise + ag domain knowledge + farmer relationships; legacy ag software lacks AI capability; AI companies lack ag context and distribution

Long-term Vision: Data moat compounds as user base grows; benchmarking engine becomes increasingly valuable and defensible; local trust becomes sustainable distribution advantage
