

Elevator Pitch: Codefi Farm Financial Planning

Core Message Framework

The One Thing: Farmers gain confidence in input decisions by benchmarking against regional peers—through the advisors they already trust.

Problem Statement: Mid-scale farmers operate in information asymmetry. They make March input decisions with incomplete data (lender advice, gut instinct, fragmented tools). They lack independent analysis to validate choices or negotiate with advisors. Result: anxiety, suboptimal margins, inability to push back.

Solution in One Sentence: Peer benchmarking data that lets farmers validate profitability decisions and negotiate with confidence—delivered through co-ops and agronomists, not replacing them.

Why You: Validated with 5 farmers (100% problem confirmation), established co-op/extension/lender relationships, ag domain expertise, rules-based MVP (honest, not AI hype).

Hook: "Most mid-scale farmers make input decisions in the dark."

15-Second Pitch (Networking)

Script: "Most mid-scale farmers make input decisions in the dark—comparing themselves to lender advice or gut instinct. We give them peer benchmarking data so they can validate their decisions with confidence. And we do it through the agronomists and co-ops they already trust, rather than replacing them."

Use When: - Casual networking events - Introductions at conferences - "What do you do?" questions - Initial co-op conversations

Goal: Create curiosity + signal partnership positioning (not disruption). Listener should think: "That's a real problem. And they're not trying to replace my advisors."

30-Second Pitch (Standard)

Script: "Most mid-scale farmers make input decisions in the dark. They lack independent data to validate choices or push back on advisor recommendations. That costs them thousands in margin. Codefi solves this with peer benchmarking—farmers see how their costs and margins stack against regional peers on similar soil, acreage, commodities. But here's what's different: we deliver this through co-ops and agronomists, not around them. We're enabling advisors, not replacing them. We've validated the problem with five farmers and are piloting with our first co-op partners. I'd love to explore how we might work together."

Use When: - Demo days - First investor meetings - Co-op partnership conversations - Lender intro calls

Delivery: Pause after "in the dark" for impact. Emphasize "through co-ops and agronomists" to signal trust.

60-Second Pitch (Full Story)

Opening (12 sec): "Most mid-scale farmers make input decisions in the dark. March rolls around, they're deciding on seed, fertilizer, crop protection—but they lack independent data to validate their choices or push back on advice. That information gap costs them thousands."

Solution (15 sec): "Codefi gives farmers peer benchmarking data. They see how their per-field costs and margins stack against similar farms in their region—same soil, acreage, commodity. In 20 minutes, they run a scenario, validate assumptions, and have data to share with their lender or agronomist."

Differentiation (10 sec): "What sets us apart: we're not trying to replace advisors. We work through co-ops and agronomists. Farmers use our data to have better conversations with the trusted advisors they already rely on. That's how trust actually works in agriculture."

Traction (10 sec): "We've validated the problem with five farmers across the Midwest. All five said they lack 'ammunition to negotiate.' We're now piloting with our first co-op partners this pre-season."

Ask (13 sec): "For co-ops and agronomists: I'd love to explore how we might white-label this into your member onboarding. For investors: we're raising to hit 40-50 customers and prove unit economics by Year 1. Happy to share the financial model."

Audience-Specific Variations

FOR FARMERS: Emphasize: Confidence, independent data, negotiation power, minimal friction (30-day free pilot). De-emphasize: tech, AI, complexity. CTA: "Try the pilot free for 30 days. By Week 2 you'll see your P&L validated. By Week 3 you'll run your first scenario and share it with your lender. Let's see if it works for your operation."

FOR CO-OPS & AGRONOMISTS: Emphasize: Member retention, advisor enablement, white-label model, revenue share, pre-season onboarding. De-emphasize: disruption, replacement. CTA: "We handle the software and benchmarking. You handle trust and member relationships. Revenue share is 60/40 in your favor. Want to pilot with 10 members this pre-season?"

FOR INVESTORS: Emphasize: Validated problem, clear GTM (80% co-op, 20% direct), unit economics, Year 1 gates, defensibility timeline. De-emphasize: AI, data moat (it's Year 2+). CTA: "We're raising \$X to hit 50 customers and validate retention/LTV. Month 2 gate: 40%+ activation. Month 6 gate: 60%+ MoM retention. Here's the model."

FOR LENDERS: Emphasize: Risk management, customer intelligence, borrower confidence, decision tracking. De-emphasize: advisor replacement. CTA: "Your customers have better data. You gain visibility into their decision-making. They're less likely to default on input loans. Let's discuss integration."

Objection Handlers

"How is this different from FINPACK or John Deere?" FINPACK is a free tax filing tool, not benchmarking. John Deere is a hardware ecosystem; farmers don't trust it for independent analysis. We're regional peer benchmarking—farmers comparing themselves to farmers like them, not corporate software.

"Won't this cannibalize co-op services?" No. We're enabling co-ops to deepen advisor relationships. Farmers with data have better conversations with agronomists. That increases co-op stickiness, not decreases it. We're revenue-share partners, not competitors.

"What if farmers use this to shop around?" That's healthy. Better farmers, better decisions, better margins = better customers for co-ops and lenders. We're not designed to undermine relationships; we're designed to strengthen them through confidence.

"How do you differentiate at scale?" Year 1: Relationships and positioning (we work WITH advisors). Year 2+: Data—regional benchmarking dataset becomes more valuable as customer base grows. Competitors can't replicate without equivalent scale.

"What's your unit economics?" CAC via co-ops: \$100-160. ARPU: \$150-200/month (validated WTP). Payback: 6-8 months. Direct CAC breaks at <\$250 ARPU, so we're co-op-first Year 1.

Storytelling Version

The Setup: "Imagine you're a 2,000-acre corn and soy farmer in Missouri. It's February. Your co-op agronomist calls with input recommendations—seed, fertilizer, crop protection. They're recommending premium products."

The Problem: "You trust your agronomist, but you don't have data to validate. You can't see if your per-acre costs are in line with farms like yours. You can't run a scenario to see margin impact. So you either commit blind or second-guess yourself. Either way, you're anxious. By March, you've made a decision without ammunition."

The Discovery: "Then you find Codefi. You spend 20 minutes entering your field data. Instantly, you see how your costs stack against 30 other 1,500-2,500 acre farms in your region with similar soil. You see the margin impact of that premium seed versus a mid-tier alternative. You run a scenario."

The Transformation: "Now you call your agronomist back with data. 'Here's what I'm seeing. Help me understand why your recommendation is the right call for my situation.' Suddenly it's a conversation, not a directive. You make a better decision. You feel confident."

The Proof: "That's exactly what happened in our validation interviews. Five farmers said 'I don't have ammunition to negotiate.' All five said 'If I'm in range with peers, I'm confident.' One farmer had lost \$10K the previous year on bad input timing. He wanted tools to prevent that."

The Invitation: "That's why we built Codefi—to give farmers confidence without replacing the advisors they trust. If you're a co-op or agronomist, let's talk about how to offer this to your members. If you're a farmer, try the 30-day pilot free."

Practice & Delivery Tips

Pacing & Word Count: - 15 sec: 40-50 words (practice at natural speech pace) - 30 sec: 85-95 words (steady, deliberate, conversational) - 60 sec: 160-180 words (tell the story, don't rush the ask)

Delivery Technique: - Pause 1 sec after hook ("in the dark") for emotional impact - Emphasize "through co-ops and agronomists" to signal partnership - Use specific numbers (5 farmers, March, \$10K losses) to build credibility - End with clear, audience-specific ask (not generic) - Maintain eye contact; lean slightly forward on the problem statement

Practice Protocol: - Record yourself on phone (listen for clarity, pacing, confidence) - Time each version to the second - Practice with co-op partners first (get feedback on advisor positioning) - Practice with farmers next (get feedback on relevance and confidence) - Iterate based on objections you hear

Body Language: - Confident but not manic (you're solving a real problem, not hyping) - Open posture; hands visible - Smile when talking about farmer confidence/outcomes - Serious/empathetic when

discussing the problem

Adaptation in the Room: - Listen for their concern. If they ask "Will this replace us?" lean into advisor partnership messaging. If they ask "Why now?" lean into March timing urgency. If they ask "What's the proof?" lead with farmer quotes.
